DETAILS Name Sagair B Rel Number Sagair S ADVACED SUB ARRAYPROBLEM You are competing in a basketball contest. In this contest the score for each successful shot depends on both the distance from the basket and the player's position. The ball is shot Nimes, successfully. You are given an array A containing the distance of a player from basket for N shots. The flowest of rary represents the position of the player. Score is calculated by multiplying the position with the distance from the basket. You task is to find and return an integer value, representing the maximum possible score you can achieve by choosing a continguous subarray of size & from the given array. Note: A subarray is a contiguous part of array. A saume the player is standing on a cartestan plane. Input Format Input Format Input Format Input An integer value N representing the number of shots made by the player input 2: An integer K representing the size of subarray input 3: A array of integers Sample Input Sample Output 14 Source Code:	8x- 07.	ტ` ფ [⋆]	Logo	.9	W.
